What is storyboarding?

A sequence of drawings, typically with some directions and dialogue, representing the shots planned for a movie or television production.

How can I do it?

1. Establish a timeline for the events which will take place in your video.
2. Identify the key scenes in your story that will move the video along.
3. Decide how detailed you want your storyboard to be. The more detailed the storyboard is, the more detailed your video will be.
4. Write down a description of what each cell in your storyboard will depict.
5. Use one of the programs below to create your storyboard.

Why should I storyboard?

A storyboard can help you visualize how your video will progress. This helps make filming go more smoothly and can cut down video editing time by preventing mistakes.

Storyboard Programs for Computers

1. Storyboard That
   - online program
   - user-friendly
   - wide selection of characters and scenery
